HOLE PUNCH TIE RIBBON THROUGH

FROM SOURCE TO SEA

NACD 2027

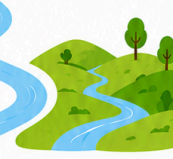
EVERY DROP HAS A JOURNEY

THE SOURCE

Water begins in mountains, hills, forests, wetlands, or springs. This is called the source.

THE JOURNEY

Gravity carries water downhill into streams. Streams join to form creeks and rivers that flow across the land.



ALONG THE WAY

Healthy land helps slow, absorb, and filter water. Clean water supports farms, wildlife, and communities.

THE SEA

Rivers eventually reach a lake, bay, or ocean. Water then evaporates, forms clouds, and returns as rain or snow, continuing the water cycle.

Caring for the land helps protect every drop from source to sea.
