Located more than 100 ft but less than 400 ft from well	Yes	No

Is the Current/Failing System:

Located less than 100 ft from a stream	Yes	No
Located more than 100 ft but less than 300 feet from a stream	Yes	No
Located more than 300 ft but less than 500 feet from a stream	Yes	No
Located less than 1,000 ft from a Public Water Supply	Yes	No
Located more than 1/2 mile but less than 1 mile from a Public Water Supply	Yes	No
Located More than 1 mile but less than 2 miles from a Public Water Supply	Yes	No

Is the Current /Failing System Experiencing *Effluent Surfacing:

Constant	Yes	No
Intermittent	Yes	No

- *Effluent: Liquid waste flowing out of a household into a water body such as a lagoon or a “septic” system.*

Estimated Cost: _____

Landowner Signature: _____

Date: _____

Perennial Stream: A well-defined channel that contains water year round during a year of normal rainfall. Groundwater is the primary source of water for a perennial stream.

Intermittent Stream: A well-defined channel that contains water for only part of the year, typically during winter and spring. The flow may be heavily supplemented by storm water runoff.
